

# GSM Scout active

Simply supervising with your mobile and SMS - immediately informed, immediately reaction! Connect, adjusting, ready!

Order no.: 700100209

## Applications

Supervising of:

- Sailing vessel, boats and yachts
- Camper and Caravans
- Homes

Telemetry of electrical devices:

- Bilge pump
- Light
- Cooler

## General informations

The scout GSM is an inexpensive and easy solution for the supervision of movable objects like boats, yachts, caravans or campers as well as the supervising of homes. Over connected sensors the device grasps, e.g., burglaries, upcoming fire, water or other serious events. These are immediately sent by SMS to any mobile phone and the user is able to initiate immediately countermeasures. The system is simply configurable about the phone number memory of the SIM-card and is ready for use immediately.

Further it is possible to activate the relais outputs by an SMS. So the user is able to switch different devices on board on or off.

## Technical specific features

- Comfortable connection about screw contacts
- No special software necessary
- The easy configuration about SIM-card
- Small construction style
- 2 relais contacts for switching devices
- Customizable event messages

## Conditions

To use the scout GSM, you need:  
Power supply, activated SIM-card (prepaid or fix contract), Sensors
